Projects

Project Name: TrekHub

Environment: React JS, Spring Boot, HTML, CSS, MySQL

Team Size: 4 Members

Role: Front End Developer, Back End Developer

Project description

In current situation people are searching the centralize platform to solve their trekking related issues like lack of information about trekking destination, food and safety problem, language barrier problem. This project provides online platform to solve their trekking related issues, plan the trekking events and provide better services for memorable experiences. There are three layers in project like frontend layer, server layer, database layer. In frontend layer we used Html, CSS, JavaScript, React JS technologies. In server layer we used Spring Boot, Hibernate, .Net MVC technologies. In Database layer we used MySQL technology.

Roles & Responsibilities

- Involved in requirement gathering and preparing the related documentation.
- Participating in weekly Project meetings and discussing issues in the applications and finding the solutions and workarounds.
- Work on the admin module of frontend and backend technologies.
- I am designing the admin functionality for adding treks, planning treks, adding guides, and managing reports and reviews.

Project Name: Creators Communication Pvt ltd

Environment: HTML, CSS, Bootstrap

Team Size: 4 Members

Role: Front End Developer

Project description

This is a live client project for Creators Communication Pvt. Ltd., a networking company that works with Telestar. The project focuses on designing the front-end, utilizing HTML, CSS, and Bootstrap technologies. The goal was to create a responsive, user-friendly interface that aligns with Telestar's branding and business needs, ensuring seamless navigation and a professional look across various devices. We also aimed to provide an intuitive experience for users by focusing on clean design and performance optimization.

Roles & Responsibilities

- Participating in every day of Project meetings and discussing issues in the applications and finding the solutions and workarounds.
- Work on the about us section, hero section, navbar section, key differentiators section, why choose us section and footer section.

Project Name: Online Electronic Device Booking and Shopping

Environment: React JS, JavaScript, MongoDB, Express, Bootstrap, HTML, CSS, MySQL

Team Size: 1

Role: Front End Developer, Back End Developer

Project description

In the current digital age, people increasingly prefer online platforms for booking and shopping electronic devices. To address this growing demand, I have developed an online electronic device booking and shopping application as a self-driven project. This platform allows users to easily browse and book electronic devices, providing a seamless shopping experience. The project utilizes the MERN stack (MongoDB, Express, React, and Node.js) for both front-end and back-end development, ensuring high performance, scalability, and user-friendly interactions.

Roles & Responsibilities

- Designed and developed the user interface using React.js to ensure a responsive and intuitive experience across different devices.
- Implemented state management using React hooks and Restful and web API for efficient data flow and interaction. • Ensured a smooth, engaging UI using HTML, CSS, and Bootstrap for styling, with a focus on mobile responsiveness.
- Developed the server-side logic using Node.js and Express to handle requests, manage users, and interact with the database.
- Set up a MongoDB database to store user information, product listings, and booking details.
- Implemented API routes for user authentication and CRUD operations for managing products and bookings.

I hereby declare that the information furnished above is true and correct to the best of my knowledge and belief.
